Family Planning

Are you in your teens, 20's or 30's? **Read this JUST IN CASE!**

Remember – many women don't know they are pregnant for a few weeks, or a few months. If there is a possibility you might become pregnant, you should not drink any alcohol or take any drugs not approved by your doctor.

Doctors recommend that women wait at least two years after giving birth before having another child. Birth spacing increases physical and mental health benefits for the mother, baby, and older siblings. For more information about birth spacing or access to contraceptive services (which are 100% covered under the Affordable Care Act), visit [www.dhss.alaska.gov/dph/wcfh/Pages/timing](http://www.dhss.alaska.gov/dph/wcfh/Pages/timing), or contact the Juneau Public Health Center at 465-3353.

I am thinking about getting pregnant. How can I take care of myself?

This is good – you are planning ahead. Start taking care of yourself before you start trying to get pregnant. Talk to your doctor before pregnancy to learn what you can do to prepare your body. Ideally, women should give themselves at least 3 months to prepare before getting pregnant.

The five most important things you can do before becoming pregnant are:

2. Take vitamins with Vitamin D and at least 400 to 800 micrograms (400 to 800mcg or 0.4 to 0.8 mg) of folic acid every day for at least 3 months before getting pregnant.
3. Talk to your doctor about any medicines you are using. These include dietary or herbal supplements. Some medicines are not safe during pregnancy.
4. Avoid contact with toxic substances or materials at work and at home that could be harmful, including cat feces.
5. If you have a medical condition, talk with your doctor, and be sure your vaccinations are up to date.
Why do I need prenatal care?
As soon as you think you might be pregnant, call your doctor to schedule a visit. Whether this is your first pregnancy or third, prenatal health care is extremely important. Your doctor will check to make sure you and the baby are healthy at each visit. If there are any problems, early action will help you and the baby.

Babies of mothers who do not get prenatal care are three times more likely to have a low birth weight and five times more likely to die than those born to mothers who do get care. Get early prenatal care to help ensure both you and your baby will be healthy.

How often should I see my doctor during pregnancy?
Your doctor will give you a schedule of all the visits you should have while pregnant. Most experts suggest you see your doctor:
• about once each month for weeks 4 through 28
• twice a month for weeks 28 through 36
• weekly for weeks 36 to birth

Your doctors can talk with you about any questions you have, and give you important tips to give your baby a healthy start to life. Be sure to follow your doctor’s advice.

Where can I find prenatal care in Juneau?
• Denali KidCare covers all prenatal visits for pregnant women. Ask your medical provider about vouchers to cover local travel (taxi) to and from prenatal appointments, well-baby checks, and some classes.
